

Presentation of final project

Studentnumber:38881233

Description of functional requirement: student information management system must be able to implement all links of adding, deleting, correcting, and checking.

functional requirement:

- 1.User may input username and password.
- 2.Student information must be able to edit, delete, add.
- 3.User must be able to browse the list of student information.
- 4.After editing the student information, system should be able to show user a result which helps user to know whether the information has already been modified successfully.

Description of non-functional requirement: The colors and backgrounds of the fonts are fixed, as is the structure of the system, all additions, deletions, corrections and anything other than input are non-functional requirements.

Non-functional requirement:

- 1.Font and format will not change.
- 2.The whole process of system operation is very smooth.

3.All the information is displayed in the system.
